WARNING

- Operation of this UTV by anyone under the age of 16 may increase the risk of severe injury or death!!! This vehicle can roll if not driven properly!!!
- Adult supervision is always required.
- Anyone under the age of 16 may **NOT** operate this UTV.
- Overloading the UTV may adversely affect the handling of this vehicle.
- Operator use only, excess passengers prohibited.
- This vehicle is designed and manufactured for OFF-ROAD use only.
- Driving Off Road Vehicles on public streets, roads, or highways is illegal.
- All Riders MUST wear helmet and other protective equipment.
- Do **NOT** operate this vehicle during/after consuming Alcohol or Drugs.
- Don’t do drugs. It’s not healthy for you.
- When refueling, you must shut off the engine to avoid spark or fire risk.
- Read owner's manual carefully before operating this vehicle.
INTRODUCTION

Dear Valued ODES Customer,

Congratulations and thank you for choosing to become a part of our ODES family with the purchase of your new ODES UTV. We have designed this vehicle with you, the customer, in mind, providing you with great power, stability, and functionality with your UTV. This UTV was designed for OFF Road use only.

This Operator’s Manual is here to familiarize any operators of all proper operating procedures. It also includes important and required information about the general care and maintenance of your ODES UTV.

Read the following pages regarding safety warnings, active riding skills, and precautions for your own safety and the safety of others around you. Children and adults have different skill levels, physical abilities, and use of judgment. Anyone under the age of 16 is NOT permitted to drive this vehicle. Parents should always supervise their child’s (anyone under 16) use of this UTV at all times.
All information in this manual is based on the latest product data and specifications available at the time of printing. ODES, the Manufacture of this UTV, reserve the right to make product changes and improvements, which may effect the illustrations, layout, or explanations without notice.

If you have any other questions regarding our UTV’s operation or maintenance, please contact any authorized dealer.

Product and specifications are subject to change without notice.

PAY ATTENTION TO YOUR SAFETY

This section presents some of the most important information and recommendations to help you ride your UTV safely. Please read these pages. This section also includes information about the location of safety labels on your UTV.

**Important safety information**

Your UTV can provide many years of service and fun if you take responsibility for your own safety, others around you, and understand the challenges you can meet while riding. Throughout this owner’s manual, you will find many helpful recommendations to protect yourself and others while riding. The following are some we consider most important.

**Follow the age recommendation**

The minimum recommended age of this UTV model is 16 years. Anyone under the age of 16 are NOT permitted to operate this vehicle.

**Always wear a helmet**

It is a proven fact that helmets significantly reduce the number and severity of head injuries and or death. So always wear protective head gear while operating this
vehicle! We also recommend wearing protective boots, gloves, and other protective gear.

**Off-road use only**

Your UTV is designed for OFF-ROAD use only. The tires are not made for pavement, and the UTV does not meet the specifications required for use on public roads.

**Take time to learn & practice**

Even if you have ridden other UTVs, take the time to become familiar with your skills and get accustomed to the size and weight of this vehicle. Because many accidents involve inexperienced or untrained riders, we recommend all riders to take a training course approved by the UTV safety institute. Contact an authorized UTV dealer to find out about training courses near you.

**Be alert for off-road hazards**

The terrain can present a variety of challenges when you ride off-road. Continually “read” the terrain for unexpected turns, drop-offs, rocks, ruts, and other hazards. Always keep your speed low enough to allow time to see and react to hazards.
**Ride within your limits**

Pushing the limits is another major cause of UTV accidents. Never attempt to ride beyond your personal abilities or faster than conditions warrant.

**Don’t drink and ride**

Drinking and riding can also cause potentially fatal accidents. Do not operate this vehicle if you have consumed any alcohol. Just one drink can prohibit you from reacting in enough time to your changing surroundings.

**Keep your UTV maintained**

It is important to keep your UTV properly maintained and in safe riding condition. To help avoid having a breakdown, inspect your vehicle before each ride and keep it maintained. This unit comes with labels and a hangtag containing important safety information. Make sure anyone who rides this vehicle reads, and fully understands its contents before riding. These labels should be considered permanent parts of this UTV. If one comes off or becomes hard to read, contact an authorized dealer to have them replaced.
TIPS FOR SAFE DRIVING

1. Reduce speed when approaching any turns, hills, or bends. Once you have fully turned, gradually increase speed.
2. Be careful when passing any vehicle in front of you.
3. Check the brakes each time you ride to ensure they have not been cut during off-road riding or are too soft for full stopping capabilities.
4. During riding, the vibration can loosen the bolts. Before each ride, take time to inspect that all bolts are tightened.

For training please call ASI at 1-800-887-2887
This manual will provide you with a good basic understanding of the features and operation of this vehicle. It also includes basic maintenance and inspection procedures. If you have any questions regarding the operation or maintenance of your vehicle, please contact your dealer.

<table>
<thead>
<tr>
<th>! WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Please read this manual carefully before operating this vehicle. Do not attempt to operate this vehicle until you have attained adequate knowledge of its controls and operating features. Regular inspections and careful maintenance will help ensure that you safely enjoy the capabilities and reliability of this vehicle.</td>
</tr>
</tbody>
</table>
# IMPORTANT MANUAL INFORMATION

FAILURE TO COMPLY WITH THE WARNINGS CONTAINED IN THIS MANUAL CAN RESULT IN SERIOUS INJURY OR DEATH.

Particularly important information is distinguished in this manual by the following notations:

<table>
<thead>
<tr>
<th>!</th>
<th>The Safety Alert Symbol means ATTENTION! BECOME ALERT! YOUR SAFETY IS INVOLVED!</th>
</tr>
</thead>
<tbody>
<tr>
<td>! WARNING</td>
<td>Failure to follow WARNING instructions <strong>could result in severe injury or death</strong> to the vehicle operator, a bystander or a person inspecting or repairing the vehicle.</td>
</tr>
<tr>
<td>CAUTION:</td>
<td>A CAUTION indicates special precautions that must be taken to avoid damage to the vehicle.</td>
</tr>
<tr>
<td>NOTE:</td>
<td>A NOTE provides key information to make procedures easier or clearer.</td>
</tr>
</tbody>
</table>

*Product and specifications are subject to change without notice.*
IMPORTANT NOTICE

● This vehicle is designed and manufactured for off-road use only. The law to operate this vehicle on any public street, road, or highway prohibits it.

● Check the laws and regulations in your state before choosing where to operate this vehicle. It is illegal to operate this vehicle on public lands where certain vehicle sizes are prohibited.

● This vehicle complies with most state off-highway noise level and spark arrester laws and regulations.
HOW TO IDENTIFY YOUR UTV

The main components of your vehicle are identified by different serial numbers. It may sometimes become necessary to locate these numbers for warranty purposes or to trace your vehicle in the event of it being lost or stolen. These numbers are required by the authorized UTV dealer to complete warranty claims properly. No warranty will be allowed if the engine identification number (EIN) or vehicle identification number (VIN) is removed or manipulated in any way. We strongly recommend that you take note of all the serial/vin numbers on your vehicle and supply them to your insurance company.
Vehicle identification and description

Vehicle identification numbers
Record your vehicle’s identification numbers and model label information in the spaces provided. Remove the spare key and store it in a safe place. Provided for assistance when ordering spare parts from our company or dealer or for reference in case the vehicle is stolen.

NOTE:

The vehicle you have purchased may differ slightly from those shown in the figures of this manual.
Location of the warning and specification labels
Read and understand all the safety labels on your vehicle. They contain important operating and safety information. If any of them become lost or faded, contact your authorized dealer to have them replaced.
(3) WARNING
STORAGE
Do not store vehicle for long periods of time with gas in tank or with positive battery cables connected.

(3) WARNING
* Always obey local traffic rules
* Always wear a helmet and eye protection.
* The speed in the first 300 miles should not be over 25 mile/hour
* Check the following items before each use
  - Tire Pressure
  - Oil Level

(3) WARNING/AVERTISSEMENT
THIS VEHICLE IS AN OFF ROAD VEHICLE NOT INTENDED FOR USE ON PUBLIC ROADS.
CE VEHICULE EST CONCU POUR UN USAGE HORS POUTE ET NEST PAS DESTINE AUX VOIES PUBLIQUES.

(5) WARNING
Fire-proof
It is necessary to use 83# unleaded gasoline or higher.
Make sure the engine is off and avoid spilling fuel on a hot engine when refueling.
Do not smoke, make sure that there are no open flames or sparks in the area when refueling.

(4) WARNING
To active or deactivate 4x4 system, ensure that the UTV is stopped and not moving before engaging 4x4 system.

(6) WARNING
IMPROPER TIRE PRESSURE OR OVERLOADING CAN CAUSE LOSS OF CONTROL.
LOSS OF CONTROL CAN RESULT IN SEVERE INJURY OR DEATH.
OPERATING TIRE PRESSURE: Set with tires cold.
RECOMMENDED: FRONT: 320 kPa (45 lb/ft²) 9psi
               REAR: 320 kPa (45 lb/ft²) 9psi
MINIMUM:    FRONT: 480 kPa (70 lb/ft²) 7psi
               REAR: 480 kPa (70 lb/ft²) 7psi
Never set tire pressure below minimum.
Tire may dislodge from rim.

Gross Vehicle Weight Rating: 9000kg (1984 lbs)
maximum including vehicle weight, operator, passenger, accessories, cargo, and (if applicable) trailer tongue weight.

(7) WARNING
It’s dangerous to put the plastic film on head!
WARNING

It’s dangerous to put the plastic film on head!

WARNING

NEVER Carry a passenger on this cargo.

WARNING

Severe INJURY or DEATH can result if you ignore the following:
- Maximum Load in Cargo Bed: 100 kg (220 lbs).
- Never carry passengers in cargo bed.
- Cargo can affect handling and stability. Read Owner’s Manual before loading or towing.
- When loading with cargo or towing a trailer, reduce speed and allow more room to stop. Avoid hills and rough terrain.
- Be sure cargo is secured - a loose load could change handling unexpectedly.
- Keep weight in the cargo bed centered, and as low and far forward as possible. Top-heavy loads increase the risk of overturn.

WARNING

Improperly loading a trailer and failure to use extra care when pulling trailer can cause an accident or injury. Never load more than 50 kg (110 lbs) tongue weight on the towing bracket. Do not tow more than 385 kg (847 lbs) rolling weight (trailer plus cargo). Operate in low-range gears only, allow for increased braking distance, and use extreme caution when operating on inclines. Read carefully the loading information and trailer hitch sections in the owner’s manual.

MAX 9 INCH (230MM)
(11) WARNING
Only put your hands when the motor is 100% cool, if the motor has been running in the last 2 hours, do not put hands into it!

(12) WARNING
ENGINE OIL
Please change your engine oil after the first 300 miles and each 1,000 miles thereafter.
Use only type SAE 10w 40 oil
Capacity of engine oil tank: 2.2L

(13) WARNING
1. Kick the neutral position backward comes to reverse.
2. No changing reverse gear when the vehicle is moving

(14) WARNING
Please fasten the seat belt before driving.

(15) WARNING
Off road use only

(16) MADE IN CHINA
SAFETY INFORMATION

This off-highway utility vehicle handles differently from other vehicles including other UTVs, ATVs, Dune Buggies, Go Karts, or cars.

SEVERE INJURY OR DEATH can result if you do not follow these instructions:

● Read this manual and all labels carefully and follow ALL operating procedures.
● This vehicle is designed to carry one driver and one passenger ONLY! No one is to be carried in the rear of the vehicle.
● Seat belts must be worn by driver and passenger at all times.
● If you cannot reach and hold the grip on the roll cage you may not ride this vehicle.
● Do not operate the vehicle on any paved surfaces, including sidewalks, driveways, parking lots, and streets.
● Never operate this vehicle on any public street, road, or highway, even a dirt or gravel street.
● Never operate this vehicle without wearing an approved motorcycle helmet that fits properly.
  You should also wear eye protection, gloves, sturdy boots, long-sleeved shirt or jacket, and long pants.
● Never consume alcohol or drugs before or while operating this vehicle.
● Never operate at speeds too fast for your skills or the conditions. Always go at a speed that is
proper for the terrain, visibility, operating conditions, and your experience.

- Never attempt jumps or other stunts.
- Inspect your vehicle before each use to be sure it is in safe operating condition. Always follow the inspection and maintenance procedures and schedules described in this manual.
- Always keep both hands, arms, feet, and legs in side the vehicle at all times. Keep your feet on the floorboard. Never hold onto the roll cage except when using the handgrip inside the roll cage. Otherwise, your hand could be injured if it is caught between the roll cage and an obstacle outside the vehicle.
- Always keep both hands on the steering wheel when driving.
- Never wrap your thumbs and fingers around the steering wheel. This is particularly important when driving in rough terrain. The front wheels will move right and left as they respond to the terrain, and this movement will be felt in the steering wheel. A sudden jolt could turn the steering wheel around, and your thumbs or finger could be injured if they are in the way of the steering wheel spokes.
- Take extra caution when operating on unfamiliar terrain. Always be alert to changing terrain conditions when driving the vehicle.
- Always check terrain carefully before going down hills. Go as slowly as possible. Never go
down a hill at high speed.

- Always check for obstacles before operating in a new area.
- Never operate the vehicle in fast flowing water or water deeper than the floorboards on this model. Wet brakes may have reduced stopping ability. Test your brakes after leaving water. If necessary, apply them several times to let friction dry out the linings.
- Always be sure there are no obstacles or people behind you when you operate in reverse. When it is safe to proceed in reverse, go slowly. Do not brake abruptly when carrying loads in the cargo bed.
- Always use the size and type of tires specified in this manual.
- Always maintain proper tire pressure as described in this manual.
- Never exceed the stated load capacity. Cargo should be as far forward in the bed as possible, and distributed evenly from side to side. Be sure cargo is secured so that it cannot move around during operation. Reduce speed and follow instructions in this manual for carrying cargo or pulling a trailer. Allow greater distance for braking.

Functions of the respective switch positions are as follows:

OFF:
All electrical circuits are switched off. The key can be removed from this position.

ACC: (first step)
Radio, driving lamp, horn, standby battery, air fan controller

ON: (second step)
Electronic fuel injection system, 2WD/4WD switch, Instrument start to work

START:
The electric starter is engaged by turning and holding the key in this position. Release the key when the engine starts.
CAUTION:

- Do not operate the electric starter continuously for more than seconds, or starter damage could occur. Wait at least 5 seconds between each operation of the electric starter to let it cool.
- Do not turn the key to the "START" position with the engine running, or damage to the electric starter can result.
- See starting instructions prior to starting the engine.
Indicators & Display
**Odometer**

When selected, the odometer registers total distance traveled in miles while the ignition is on A. To change the display from trip meter to odometer, press and release the Odometer/Trip meter select button.

**Functions switch**

Press the MODE button. The modes of ODO, TRIP A, TRIP B, HRA and HRB will display in the odometer and be switched between. The figure of speed will display and update synchronous while switching between KM/H and MPH in unit of pedometer. By pressing “Time Set ”, the user can set the hour and minute. Adjust hours or minutes by ascending or descending by continuing to press button of mode of “Set/Reset”, user can clean the record to zero for particular period of working mileage and time by pressing the mode of “Set/Reset “ while showing mode of “TRIP A and HRA” in the speedometer.

![Image](image.png)

(1). Speed meter
(2). Time
(3). Trip meter
Km/h & mph mode change
Press the MODE button; choose either Km/h or mph as needed.

Other indicator lights
Coolant temperature indicator light ““
It indicates the temperature of coolant, if the temperature is above 102°C, stop engine immediately. Check coolant level and add if low. See authorized dealer if temperature indicator stay on and overflow tank is full of coolant.

Oil pressure indicator light ““
Indicates low/high oil pressure. When illuminated, see authorized dealer.
After turning the ignition switch on, the lamp shall be on, and the lamp shall be off after starting the engine. If the light is on while the engine is on, it indicates that the system has an error.

When some electric parts are reading faulty, check engine indicator lamp will also be ON, the vehicle still can be running, the driving performance will get worse, which reminds the driver to send the vehicle in for repair.
Switches

These switches were installed on the instrument.

Horn switch

1. Horn switch

Please press the switch when you need.

NOTE:

Please don’t press horn switch too much, in order to prevent disturb others.
Headlight Switch

1. Low/High Beam
The low/high beam headlight switch is located on the upper console. This switch is used to select either the headlights low or high beams.

Light switch “/”
Set the switch to “” to turn on the low beam and the taillights.
Set the switch to “” to turn on the high beam and the taillights.

Indicator switch

1. Indicator switch
Please press “ ” when you need to turn right.
Please press “ ” when you need to turn left.
1. Emergency switch

Please press emergency switch to warn others when emergency or accident happens.

1. Over Rider switch

Reverse control switch can improve the safety of the vehicle and the driver’s control performance of the vehicle handling. When you are on smooth terrain, you can close the switch to remove reverse speed limit. When you are in a complex location, you can open the switch to limit your reverse speed to improve safety.
CAUTION:
Do not use the headlights with the engine turned off for an extended period of time. The battery may discharge to the point that the starter motor will not operate properly. If this should happen, remove the battery and recharge it.

On-Command four-wheel drive and differential gear lock switches

1. On-Command four-wheel-drive switch “2WD”/“4WD”
2. On-Command differential gear lock switch “LOCK”/“4WD”
This vehicle is equipped with an On-Command four-wheel drive switch “2WD”/“4WD” and a differential gear lock switch “LOCK”/“4WD”. Select the appropriate drive according to terrain and the conditions.

- Two-wheel drive ("2WD"): Power is supplied to the rear wheels only.
- Four-wheel drive ("4WD"): Power is supplied to the rear and front wheels.
- Four-wheel drive with the differential gear locked ("4WD-LOCK"): Power is supplied to the rear and front wheels when the differential gear is locked ("DIFF.LOCK"). Unlike the 4WD mode, all wheels turn at the same speed regardless of traction.

---

**WARNING**

**POTENTIAL HAZARD**
Changing from 2WD to 4WD or from 4WD to 4WD-LOCK ("DIFF.LOCK") or vice-versa while the vehicle is moving.

**WHAT CAN HAPPEN**
The vehicle handles differently in 2WD than in 4WD and in 4WD-LOCK in some circumstances. Changing from 2WD to 4WD or from 4WD to 4WD-LOCK or vice-versa while moving may cause the vehicle to unexpectedly handle differently. This could distract the operator and increase the risk of losing control and an accident.

**HOW TO AVOID THE HAZARD**
Always stop the vehicle before changing from 2WD to 4WD or from 4WD to 4WD-LOCK, or vice-versa.
On-Command four-wheel drive switch
"2WD"/"4WD"

1. Lever
2. On-Command four-wheel drive switch "2WD"/"4WD"

To change from 2WD to 4WD, stop the vehicle, and then set the switch to "4WD". When the vehicle is in 4WD, the four-wheel-drive indicator light “” will come on. To change from 4WD to 2WD, stop the vehicle, be sure the lever is set to position ○, and then set the switch to "2WD".

Differential gear lock switch
"LOCK"/"4WD"

1. Differential gear lock switch "LOCK"/"4WD"
2. Lever

To lock the differential gear in 4WD, stop the vehicle, and make sure the On-Command four-wheel-drive switch is set to "4WD", move the lever to position ●, and then set the switch to "LOCK". When the differential gear is locked, the differential gear lock indicator light “” on, for special use.
models, the differential gear lock indicator light “DIFF.LOCK” and the differential gear lock indicator “ ” on the multi-function meter unit display will come on. The differential gear lock, stop the vehicle and set the switch to "4WD".

**NOTE:**
- If the differential gear lock is not engaging properly, turn the steering wheel back and forth to help it engage.
- Riding before the differential gear lock is properly engaged will cause the engine speed to be limited until engagement is complete.

<table>
<thead>
<tr>
<th>! WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>POTENTIAL HAZARD</td>
</tr>
<tr>
<td>Riding too fast while the vehicle is in 4WD-LOCK.</td>
</tr>
</tbody>
</table>

**WHAT CAN HAPPEN**
All wheels turn at the same speed when the differential is locked, so it takes more effort to turn the vehicle. The amount of effort required is greater the faster you go. You may lose control and have an accident if you cannot make a sharp enough turn for the speed you are traveling.

**HOW TO AVOID THE HAZARD**
Always ride at a slow speed when the vehicle is in 4WD-LOCK, and allow extra time and distance for maneuvers.
**Auxiliary DC jack**

The auxiliary DC jack is located at the right and left side of the front panel. This jack can be used for suitable portable players. Only use the DC jack while engine is running.

1. **Auxiliary DC jack cable** (×2)

1. Set the light switch to “OFF”.
2. Start the engine.
3. Open the auxiliary DC jack cap, and then insert the accessory power plug into the jack.

4. When the auxiliary DC jack is not being used, cover it with the cap.

**Maximum rated capacity for the auxiliary DC jack:**

DC 12V, 120W (10A)
**CAUTION:**

- Do not use accessories requiring more than the above maximum capacity. This may overload the circuit and cause the fuse to blow.
- If accessories are used without the engine running or with the headlights turned on, the battery will lose its charge and engine starting may become difficult.
- Do not use an automotive cigarette lighter or other accessories with a plug that gets hot because the jack can be damaged.

**Radio features**

1. Front panel layout description
   (1). **VOL+/VOL-.**
   - Press VOL+ to increase the volume of the receiver;
   - Press VOL- to decrease the volume.
   (2). **SEL.**
   - This button “Selects” a variety of commands.
   (3). **MOD.**
   - The Mode button switches between FM, Auxiliary, USB, and Bluetooth.
(4). APS.
This mode scans stations of sufficient strength and stores them as pre-sets.

(5). POWER.
Turns the unit on/off.

(6). 1 ►
Preset one while in AM/FM mode; Play/Pause button while in USB or Bluetooth mode.

(7). 2/INT
Preset two while in AM/FM mode; “Introduction” mode while in USB or Bluetooth mode.

(8). 3/RPT
Preset Three while in AM/FM mode; “Repeat” mode while in USB or Bluetooth. Repeat refers to the unit’s ability to repetitively play the existing track.

(9). 4/RDM.
Preset four while in AM/FM mode; “Random” mode while in USB or Bluetooth. Random refers to the unit’s ability to randomly sequence and play songs from the music device.

(10). ➤
This symbol refers to track up; this symbol also refers to fast forward.

(11). ◀
This symbol refers to track down; this symbol also refers to rewind.

2. Radio operation
(1). Press BAND to access AM and FM.
There are three FM bands and two AM bands each consisting of four channels.

(2). APS Button. Pressing this button will ask the unit to find.

(3). Manual vs Automatic Tuning.
Automatic quick Press ➤ or ◀ to
search for a station of sufficient signal strength. Manual hold down ▶ or ◀ to search for a known channel.

(4) Of the strongest stations without the user having to search for stations. This is especially useful in areas that are new. In doing so, the unit will also program those into the memory.

3. USB operation
(1) Insert USB stick into USB slot. Note: Songs musts be mp3 or wma.
(2) Press ▶ button to play sings; press ▶ again to pause the track.
(3) Track Selection. Quick press ▶ or ◀ track up the next song or to backtrack respectively. Long press ▶ or ◀ to fast forward or reverse the current track.
(4) INT button. (INT Stands for Introduction).

Pressing this button will result in playing the first 10 seconds of each track located on the USB stick.

Pressing this again will allow the unit to resume on the current track and therefore stop the introduction of succeeding tracks.

(5) RPT button. (RPT stands for Repeat). Pressing this button will result in continually playing the current track.

(6) RDM (RDM stands for Random). Pressing this button will result random song playing.

4. Bluetooth Operation
(1) To pair / link your Bluetooth enabled device to the receiver please conduct the following: 1) Turn the stereo to mode BT.
(2) Pair your Bluetooth device. To accomplish this, go to your media
device's Bluetooth settings and turn the Bluetooth to “on”. Next, find the “Hasda” device option and connect. Allow a few seconds for the connection and you are ready to stream music you’re your device to the receiver! Please note, that if you are prompted for a 4digit code for password identification, the code entered will be 0000.

(3). Once you are paired, you can control track up and down and volume up and down of the portable media through the receiver.

5. Auxiliary input mode
(1). Press MOD button until you reach “AUX” mode.
(2). Auxiliary mode allows one to play portable music device through the headphone jack.

(3). There are 2 Auxiliary modes associated with this device.

6. Clock adjustment
The time can either be kept in a standard 12 hour format or 24 hour for aka military time. To choose between the two cycles, while in FM mode, long press the SEL button, press SEL button again. Then, press volume up or down for a 12 hour Cycle or a 24 hour cycle. Once that is designated, to set the clock, the following must be completed: while in FM mode, long press the BND button. Follow this again with a long press of the BND button. In doing so, the hour will flash. (To change the hour, press volume up or down). Another long press of the BND button will
cause the minute to change. (To change the minute, press volume up or down).

**Accelerator pedal**
Press the gas pedal down to increase engine speed. Spring pressure returns the pedal to the rest position when released. Always check that the gas pedal returns normally before starting the engine.

Before starting the engine, check the gas pedal to be sure it is operating correctly. Make sure the gas pedal fully returns to the idle position as soon as it is released.

<tr>
<td>Check the operation of the gas pedal before you start the engine. If it does not work smoothly, check for the cause. Correct the problem before operating the vehicle. Consult your dealer if you can’t find or solve the problem yourself.</td>
</tr>
</tbody>
</table>

1. Accelerator pedal
Brake pedal
Press the brake pedal to slow or stop the vehicle.

Parking brake lever
Pull the parking lever up so that the unit can engage park brake. To release the brake, press button in the front end of parking lever, then push the parking lever down.

CAUTION:
- Always pull up your parking brake when you leave your UTV.
- Adjust the parking cable if necessary.
- Be sure to fully release the parking brake lever before starting the vehicle.
Drive select lever

The drive select lever is used to shift your vehicle the L—H—N—R—P and reverse positions.

**CAUTION:**

- Only start UTV in park.
- Stop vehicle fully before shifting to reverse.
**Fuel tank cap**
Remove tank cap by turning it counterclockwise.
1. When lock cylinder in Horizontal position, the tank cap is locking status and the key can pull out
2. Rotate the key 90 ° to the right, the cap is open and the key can't be pulled out. If you want to open the cap, please rotate the cap to left.

![Diagram of fuel tank cap](image)

1. Key
2. Fuel tank cap

**Seats**
To remove a seat, pull its seat lock latch upward, lift the front of the seat, and then slide the seat forward and up.

![Diagram of seats](image)

1. Driver seat
2. Passenger seat
To install a seat, insert the fittings on the rear of the seat into the holders and push down on the seat at the front.

<table>
<thead>
<tr>
<th>! WARNING</th>

<tbody>
<tr>
<td>POTENTIAL HAZARD</td>
</tr>
</tbody>
</table>
A loose seat.

WHAT CAN HAPPEN
The operator could lose control or the operator or passenger could fall if the seat is loose during operation.

HOW TO AVOID THE HAZARD
Make sure the seat is securely latched.

---

Seat belts

This vehicle is equipped with three-point seat belts for both the operator and passenger. Always wear the seat belt while riding in the vehicle.
To wear the seat belt properly, do the following:
1. Hold the latch plate as you pull the belt across your lap and chest. Make sure the belt is not twisted and is not caught on any portion of the vehicle, your clothing, or any equipment you are carrying.
2. Push the latch plate into the buckle until it clicks. Pull up on the latch plate to make sure it is secure.

3. Put the lap portion of the belt low on your hips. Push down on the buckle end of the belt as you pull up on the shoulder part so the belt is snug across your hips.
4. Position the shoulder belt over your shoulder and across your chest. The shoulder belt should fit against your chest. If it is loose, pull the belt out all the way and then let it retract.
5. To release the buckle, firmly press the release button.
! WARNING

POTENTIAL HAZARD
Not wearing the seat belt.
Wearing the seat belt improperly.

WHAT CAN HAPPEN
There is increased risk of being killed or seriously injured in an accident.

HOW TO AVOID THE HAZARD
Always wear your seat belt when riding in the vehicle.
Be sure the seat belt is close-fitting across your hips and chest and is latched securely.

Tilt Steering
The steering wheel height is adjustable. Adjust the steering wheel height to face your chest, not your head.
1. Unlock steering by pulling the tilt lever toward you.
2. Move steering wheel to the desired position.
3. Release tilt lever to lock steering wheel in position.

1. Tilt lever
CAUTION:
Never adjust the steering wheel height while riding. You may lose control.

Cup Holders
Two cup holders are located at the front of the lower console.

NOTE:
Do not use cup holders while riding in rough conditions.

Passenger Handholds
The passenger has access to a front handhold located in front of seat above glove box.

1. Passenger handholds
Holding the handholds helps the passenger brace against the movement of the vehicle and helps keep hands and body inside the cockpit in the event of a rollover.
CAUTION:

Never use any part of vehicle cage as handholds. Hands can be struck by objects outside the cockpit or crushed in a rollover.

Glove compartment

CAUTION:

To protect from damage, do not put metal products, like tools or sharply edged products directly in the glove compartment. If they must be stored, wrap them in appropriate cushion material.

Footrests

The vehicle is equipped with drive and passenger footrests to allow firmly planting feet on maintain proper body position while riding. The footrests help minimize the risk of leg or foot injury. Always wear appropriate footwear.
Side Nets
A side net is provided on each side of the cockpit to help arms, legs or shoulders stay inside the vehicle, thus reducing the risk of injuries. Side Nets may also keep brushes or debris out of cockpit.

CAUTION:
Never operate the vehicle unless both side nets are in place and buckled.

Side nets are adjustable and must be kept as tight as possible. To adjust side nets proceed as follows:
1. Secure side net with buckle.
2. Pull on both adjustment straps to tighten.

1. Adjustment straps
Shoulder Guards
The vehicle is equipped with shoulder guards to help restrain the entire body of driver and passenger inside vehicle.

Cargo bed

1. Cargo bed
2. Box inner support ring)X4

<table>

<tr>
<td>POTENTIAL HAZARD</td>
</tr>
<tr>
<td>Carrying a passenger in the cargo bed.</td>
</tr>
<tr>
<td>WHAT CAN HAPPEN</td>
</tr>
<tr>
<td>The passenger could fall, be thrown out, or be struck by objects in the cargo bed.</td>
</tr>
<tr>
<td>HOW TO AVOID THE HAZARD</td>
</tr>
<tr>
<td>Never carry a passenger in the cargo bed. This cargo bed is designed to carry cargo only.</td>
</tr>
</tbody>
</table>

Maximum load limit: 100kg (220lbs)
WARNING

POTENTIAL HAZARD
Overloading the cargo bed.
WHAT CAN HAPPEN
Could cause changes in vehicle handling, which could lead to an accident.
HOW TO AVOID THE HAZARD
Never exceed the stated maximum load limit for this cargo bed.
Cargo should be properly distributed and securely attached.
Reduce speed when carrying cargo. Allow greater distance for braking.

Front and rear shock absorber adjustment
The spring preload can be adjusted to suit the operating conditions.
You can reduce preload for a softer ride, or increase preload if frequent bottoming occurs.
CAUTION:
Frequent or severe bottoming can cause increased wear or damage to the vehicle.

1. Adjusting nut
Adjust the spring preload as follows.
To increase the spring preload, turn the adjusting ring in direction (a).
To decrease the spring preload, turn the adjusting ring in direction (b).

**WARNING**

**POTENTIAL HAZARD**
Improper shock absorber adjustment.

**WHAT CAN HAPPEN**
Uneven adjustment can cause poor handling and loss of stability, which could lead to an accident.

**HOW TO AVOID THE HAZARD**
Always adjust the shock absorbers on the left and right side to the same setting.

---

**Trailer hitch bracket**
This vehicle is equipped with a 5cm (2in) receiver bracket for a standard trailer hitch.
Trailer towing equipment can be obtained at an authorized dealer.

1. Trailer hitch bracket
Are you ready to drive
Before each drive, you need to make sure you and your UTV are both ready to drive. To help get you prepared, this section discusses how to evaluate your driving readiness, what items you should check on your UTV, and adjustments to make for your comfort, convenience, or safety.

Protective apparel
For your safety, we strongly recommend that you always wear an approved motorcycle helmet, eye protection, boots, gloves, long pants, and long-sleeved shirt or jacket whenever you drive. Wearing proper gear can reduce the chance of injury when you drive. The following suggestions will help you choose the proper driving gear.

Helmets and eye protection
Your helmet is your most important piece of driving gear because it offers the best protection against head injuries. A helmet should fit your head comfortably and securely. An open-face helmet offers some protection, but a full-face helmet is recommended. Regardless of the style, look for a DOT (Department of Transportation) sticker in any helmet you buy. Always wear a face shield or goggles to protect your eyes and help your vision.
**WARNING**

Operating this without wearing an approved motorcycle helmet, eye protection and protective clothing could increase your chances of head or eye injury, possibly death in the event of severe accident.

Always wear an approved motorcycle helmet that fits properly and wear goggles or a face shield to protect your eyes.

---

**Additional riding gear**

In addition to a helmet and eye protection, we also recommend:

- Sturdy off-road motorcycle boots to help protect your feet, ankles, and lower legs.
- Off-road motorcycle gloves to help protect your hands.
- Driving pants with knee and hip pads, a driving jersey with padded elbows, chest / shoulder protector.

**Drive training**

Developing your driving skills is an on-going process. Even if you have driven another UTV, take time to become familiar with this UTV in a safe area to build your skills. Do not drive in rough terrain until you get familiar with this UTV’s controls, and feel comfortable with its size and weight.
!WARNING
Operating UTV without proper instruction could increase your risk of an accident, which could lead to serious injury or death.

!WARNING
Make sure to keep your arms and legs inside at all times and to always wear your seat belt. If your UTV begins to roll and turn over do not attempt to support the UTV by holding out your arms and trying to push off the ground which could lead to severe injury or death.

Age Recommendation
It is strongly recommended that no one under 16 years of age be permitted on this UTV without adult supervision.

!WARNING
A child driving a UTV that is not recommended for his/her age could lose control and result in severe injury or death. A child under 16 years old must have adult supervision when operating this UTV.

No Alcohol or Drugs
Alcohol, drugs and driving don’t mix. Even a small amount of alcohol can impair your ability to operate a UTV safely. Likewise, drugs, even if prescribed by a physician,
can be dangerous while operating a UTV. Consult your doctor to be sure it is safe to operate a vehicle after taking medication.

<table>
<thead>
<tr>
<th>!WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating this UTV after consuming alcohol or drugs can seriously affect your judgment, slow your reaction time, affect balance and perception, and could result in serious injury or death. Never consume alcohol or drugs before or while operating this UTV.</td>
</tr>
</tbody>
</table>

**Is your vehicle ready to drive**

It is important to inspect your UTV before each drive. A pre-drive is a must to ensure there are no problems and to help prevent any collisions or harm to you or any bystanders.

<table>
<thead>
<tr>
<th>!WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Improper maintenance of this UTV or failure to correct a problem before driving can cause a crash resulting in serious injury or death. Always perform an inspection before every drive and correct any problems.</td>
</tr>
</tbody>
</table>

If your UTV has overturned or has been involved in a collision, do not drive it until you have had your UTV inspected by your dealer. There may be damages or other problems you can not see.
**Pre-drive Inspection**

The following items need to be checked before you get on the UTV:

- **Engine oil**
  Look for any leaks. Check the level of oil and add if needed.

- **Coolant**
  Check for leaks. Add coolant if needed.

- **Fuel**
  Check the level and add fuel if needed.
  Make sure the fuel cap is securely fastened. Check for leaks.

- **Tires**
  Use a gauge to check the tire pressure.
  Adjust if needed. Also look for signs of damages or excessive wear.

- **Nut & Bolts**
  Check the wheels to see that the axle nuts are tightened.

- **Underbody & Exhaust System**
  Check for, and remove any dirt, brush or other debris that could be a fire hazard or interfere with the proper operation of the UTV.

- **Air Cleaner**
  Check the air filter. Replace if needed.

- **Leaks, Loose Parts**
  Inspect your UTV and look for anything that appears unusual, such as a leak or loose cable.

- **Lights**
  Make sure the headlights, brake lights, and taillights are working properly.

- **Throttle**
  Check the free play and adjust if needed.
  Press the throttle to make sure it moves smoothly without sticking and snaps back automatically when it is released.
- Brakes
  Press the brake pedal several times, check for proper brake pedal free play. Make sure there is no brake fluid leakage.
- Engine stop
  When engine is running, turn the switch key counterclockwise. Make sure engine stops.
- Steering Wheel
  Check that the wheel turns correctly.
- Cable
  Check the cable housing for wear. Check that all fittings are tight. Replace or tighten as needed.
- Tie rod
  Check the tie rod housing for wear. Check that all fittings are tight. Replace or tighten as needed.
Safe driving precautions

Off-road use only
Your UTV and its tires are designed and manufactured for off-road use only. Do not drive on pavement. Driving on pavement can affect handling and control.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating this UTV on paved surfaces may seriously affect handling and control of the UTV, and may cause the vehicle to go out of control. Never operate on any paved surfaces, including sidewalks, driveways, parking lots and streets.</td>
</tr>
</tbody>
</table>

When driving off-road, remember to obey local off-road driving laws and regulations. Obtain permission to drive on private property. Avoid posted areas and obey “no trespassing” signs. You should never drive your UTV on public streets, roads, or highways, even if they are not paved. In many states it is illegal to operate a UTV on public streets, roads and highways drivers of street vehicles may have difficulty seeing and avoiding you, which could lead to a collision.
OPERATING THIS UTV ON PAVED SURFACES

WARNING

Operating this UTV on paved surfaces may seriously affect handling and control of the UTV, and may cause the vehicle to go out of control. Never operate the UTV on any paved surfaces, including sidewalks.

Keep hands and feet on controls
Always keep both hands on the steering wheel and your feet on the controls. When driving your UTV, it is important to maintain your balance and control of the UTV. Removing hands or feet away from the controls can reduce your ability to react and control the vehicle.

CONTROL SPEED

WARNING

Removing your hands from the steering wheel or feet from foot controls during operation can reduce your ability to control the UTV. Always keep both hands on the steering wheel and both feet on the foot controls of your UTV during operation.

Control speed

Driving at excessive speed increases the chance of an accident. In choosing a proper speed, you need to consider the capability of your UTV, the terrain, visibility, other operating conditions, and your own skills and experience.
WARNING
Operating this UTV at excessive speeds increases your chances of losing control of the UTV, which can result in an accident. Always drive at a speed that is proper for your UTV, the terrain, visibility, other operating conditions, and your experience.

Take Pre-Caution on Unfamiliar or Rough Terrain
Before driving in a new area, always check the terrain thoroughly. Do not drive fast on unfamiliar terrain or when visibility is limited. (It’s sometimes difficult to see and react to hidden rocks, bumps, or holes.)

WARNING
Failure to take pre-caution when operating this UTV on unfamiliar terrain could result in the UTV overturning or losing control. Go slowly and be extra cautious when operating on unfamiliar terrain. Always be alert to changing terrain conditions when operating the UTV.

Never drive past the limit of visibility. Maintain a safe distance between you and other off-road vehicles. Always exercise caution on rough, slippery and loose terrain.
**WARNING**

Failure to take extra pre-caution when operating on excessively rough, slippery or loose terrain could cause loss of traction or vehicle control, which could result in an accident, or overturned vehicle.

Do not operate on excessively rough, slippery or loose terrain until you have learned and practiced the skills necessary to control the UTV on such terrain. Be extra careful on these types of terrain.

---

**Do Not Perform Stunts**

You should always operate your UTV in a safe and reasonable manner. When driving keep all wheels on the ground.

**WARNING**

Attempting wheelies and other stunts increases the chance of an accident, including an overturn.

Never attempt stunts, such as wheelies or jumps.

---

**Parking Adjustment**

![Parking Adjustment Diagram]
• Pull the park brake lever up to engage the parking brake.
• To release the unit, press button on front end of parking lever then push the parking lever to the bottom.
• Adjust the parking cable if necessary.

Before operating the vehicle, check the shift lever as to change gearshift from 1 to 5 and reverse smoothly.
The shift lever should be vertical when the gear is in neutral. If not, adjust the shift cable and then tighten the nuts of the shift
cable.

**Break-in**
The first month is most important in the life of your vehicle. Proper operation during this break-in period will help ensure maximum life and performance from your new vehicle. The following guidelines explain proper break-in procedures.

1. After the engine starts, the engine should not go above 5000rpm for the first 20 hours.
2. Drive vehicle slowly, do not accelerate quickly for the first 20 hours.
3. Avoid slamming the brakes.
4. Do not exceed the vehicle speed on the below schedule.

**Starting and Operating Instructions**

- Before starting the engine, be sure that the driver is seated properly in the UTV and tighten the seat belts.
- Test the UTV in an open area at the beginning to learn how to start, turn and stop.
- Operate the UTV slowly until you become familiar with it. The turning radius on this vehicle is very small, so the centrifugal force is very high when turning at a high speed. Slow down around corners or turns to reduce the risk of overturning your UTV.
# PRE-OPERATION CHECKS

Before using this vehicle, check the following points

<table>
<thead>
<tr>
<th>!WARNING</th>
</tr>
</thead>
</table>

## POTENTIAL HAZARD

Failure to inspect the vehicle before operating and failure to properly maintain the vehicle.

### WHAT CAN HAPPEN

 Increases the possibility of an accident or equipment damage.

### HOW TO AVOID THE HAZARD

Inspect your vehicle before each use to make sure the vehicle is in safe operating condition. Always follow the inspection and maintenance procedures and schedules described in the Owner’s Manual.

---

## Front and rear brakes

### Brake fluid leakage

Check to see if any brake fluid is leaking out of the pipe joints or the brake fluid reservoir.

Apply the brakes firmly for one minute. If there is any leakage, have the vehicle inspected by an authorized dealer.

### Brake operation

Test the brakes at slow speed after starting out to make sure they are working properly.

If the brakes do not provide proper braking performance, inspect the brake system. If needed, have the vehicle inspected by an authorized dealer.
WARNING

POTENTIAL HAZARD
Driving with improperly operating brakes.
WHAT CAN HAPPEN
You could lose braking ability, which could lead to an accident.
HOW TO AVOID THE HAZARD
Check your brakes before each ride. Do not operate the vehicle if you find any problem with the brakes.
If a problem cannot be corrected by the adjustment procedures provided in this manual, have the vehicle inspected by an authorized dealer.

Fuel
Make sure there is sufficient gasoline in the tank.

CAUTION:
Use only unleaded gasoline. The use of leaded gasoline will cause severe damage to internal engine parts, such as the valves, piston rings, and as well as damage to the exhaust system.
Gasoline Type
There are two types of gasoline; gasoline containing ethanol and that containing methanol. Gasoline containing ethanol can be used if ethanol content does not exceed 10%. Gasoline containing methanol is not recommended because it may cause fuel system damage or vehicle performance problems.

<tr>
<td>Do not overfill the fuel tank. Be careful not to spill fuel, especially on the engine or exhaust pipe. Wipe up any spilled fuel immediately. Be sure the fuel tank cap is closed securely.</td>
</tr>
</tbody>
</table>
**Accelerator pedal**
Check to see that the gas pedal operates correctly. It must operate smoothly and fully spring back to the idle position when released. Have a dealer repair if necessary for proper operation.

**Seat belts**
Make sure that both seat belts are not frayed or damaged. The seat belt must move smoothly when pulled. The latch plate should click securely into the buckle and release when the release button is pushed. Wash off any dirt or mud, which could affect operation. Have a dealer repair if necessary.

**Steering**
Park on level ground. Turn the steering wheel right and left. Check for excessive free play, abnormal noises, or a rough feeling. Have a dealer repair if necessary for proper operation.

**Fittings and fasteners**
Always check the tightness of chassis fittings and fasteners before a ride. Take the vehicle to an authorized dealer or refer to the Service Manual for correct torque specifications.
Lights
Check the headlights and tail/brake lights to make sure they are in working condition. Repair if necessary for proper operation.

Switches
Check the operation of all switches. Have a dealer repair if necessary for proper operation.
Tires

!WARNING

POTENTIAL HAZARD
Operating this vehicle with improper tires, or with improper or uneven tire pressure.

WHAT CAN HAPPEN
Use of improper tires on this vehicle, or operation of this vehicle with improper or uneven tire pressure, may cause loss of control, increasing your risk of accident.

HOW TO AVOID THE HAZARD
1. Motor Manufacturing Corporation of America for this model has approved the tires listed below. Other tire combinations are not recommended.
2. The tires should be set to the recommended pressure:
   ● Recommended tire pressure:
     FRONT: 62kPa (0.62kgf/cm²), 9psi
     REAR: 62kPa (0.62kgf/cm²), 9psi
     Check and adjust tire pressures when the tires are cold.
     Tire pressures must be equal on both sides.
3. Tire pressure below the minimum specified could cause the tire to dislodge from the rim under severe riding conditions. The following are minimums:
   FRONT: 48kPa (0.48kgf/cm²), 7psi
REAR: 48kPa (0.48 kgf/cm$^2$), 7 psi

**How to measure tire pressure**

Use the tire pressure gauge.

**NOTE:**
The tire pressure gauge is included as standard equipment. Make two measurements of the tire pressure and use the second reading. Dust or dirt in the gauge could cause the first reading to be incorrect.

Set pressure with tires cold.

Set tire pressures to the following specifications:

<table>
<thead>
<tr>
<th></th>
<th>Recommended pressure</th>
<th>Minimum</th>
<th>Maximum</th>
</tr>
</thead>
<tbody>
<tr>
<td>Front &amp; Rear</td>
<td>62 kPa (0.62 kgf/cm$^2$, 9 psi)</td>
<td>48 kPa (0.48 kgf/cm$^2$, 7 psi)</td>
<td>76 kPa (0.76 kgf/cm$^2$, 11 psi)</td>
</tr>
</tbody>
</table>

1. Tire pressure gauge
Tire wear limit
When the tire groove decreases to 6 mm (0.24 in) due to wear, replace the tire.

OPERATION

![WARNING]

POTENTIAL HAZARD
Operating vehicle without being familiar with all controls.

WHAT CAN HAPPEN
Loss of control, which could cause an accident or injury.

HOW TO AVOID THE HAZARD
Read the Owner’s Manual carefully. If there is a control or function you do not understand, ask your dealer.

a. Tire wear limit
### Starting a cold engine

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>POTENTIAL HAZARD</strong></td>
</tr>
<tr>
<td>Freezing control cables in cold weather.</td>
</tr>
</tbody>
</table>

**WHAT CAN HAPPEN**
You could be unable to control the vehicle, which could lead to an accident or collision.

**HOW TO AVOID THE HAZARD**
When riding in cold weather, always make sure all control cables work smoothly before you begin riding.

1. Apply the brake.
2. Shift the drive select lever into the neutral position.
3. With your foot off the accelerator pedal, start the engine by turning the key to "START".
4. Continue warming up the engine until it idles smoothly.

**NOTE:**
- When the drive select lever is in the neutral position, the neutral indicator light should come on. If the neutral indicator light does not come on, ask our company or dealer to inspect the electric circuit.
- The engine can be started in any gear if the brake is applied. However, it is recommended to shift into neutral before starting the engine.

**NOTE:**
If the engine fails to start, release the key,
and then try starting again. Wait a few seconds before the next attempt. Each cranking should be as short as possible to preserve battery energy. Do not crank the engine more than 5 seconds on each attempt.

Jump-starting

Jump-starting the vehicle should be avoided. The battery should be removed and charged instead. However, if the vehicle must be jump-started, proceed as follows:
1. Turn the key to “OFF”.
2. Open the upper hood
3. Remove the battery compartment cover.
4. Using a charged 12V battery, connect the positive lead of the jumper cable to the positive terminal on the battery in the vehicle and the other end of the positive lead to the positive terminal of the charged battery.
5. Connect the negative lead of the jumper cable to the negative terminal of the negative lead to an unpainted metal surface of the vehicle.

6. Start the engine.

7. After the engine starts, disconnect the negative lead of the jumper cable from the vehicle and charged battery, then disconnect the positive lead of the jumper cable from the charged battery and the battery in the vehicle.

8. Install the battery compartment cover.

9. Close the hood.

**Warming up**

To get maximum engine life, always warm up the engine before starting off. Never accelerate hard with a cold engine! To see whether or not the engine idles smoothly.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not connect the negative lead of the jumper cable to the negative terminal of the battery in the vehicle.</td>
</tr>
<tr>
<td>● Be especially careful not to touch the positive lead of the jumper cable to the negative lead or not to reverse the polarity of the jumper cables when connecting to the batteries-battery, explosion and/or serious damage to the electrical system may occur.</td>
</tr>
</tbody>
</table>

**Drive select lever operation and reverse driving**

**CAUTION:**
Before shifting, you must stop the vehicle and take your foot off the accelerator pedal. Otherwise, the transmission may be damaged.

**Shifting: Neutral to High and High to Low**
1. Stop the vehicle. Keep your foot off the gas pedal.
2. Apply the brakes, and then shift by moving the gear stick along the shift guide.
3. Release the brakes and press the accelerator pedal gradually.

**NOTE:**
Make sure that the gear stick is completely shifted into position.

**Shifting: Neutral to Reverse**
1. Stop the vehicle. Keep your foot off the accelerator pedal.
2. Apply the brake pedal.
3. Shift from neutral to reverse or vice versa by moving the gear stick along the shift guide.

**NOTE:**
- When in reverse, the revere indicator light

---

1. Drive select lever

---
should be on. If the light does not come on, ask a dealer to inspect the reverse indicator light electrical circuit.

- Due to the synchronizing mechanism in the engine, the light may not come on until the vehicle starts moving.

4. Check behind for any people or obstacles, and then release the brake pedal.

5. Press the gas pedal gradually and continue to watch to the rear while backing.

<table>
<thead>
<tr>
<th>! WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>POTENTIAL HAZARD</td>
</tr>
</tbody>
</table>

Improperly operating in reverse.

**WHAT CAN HAPPEN**

You could hit an obstacle or person behind you, resulting in serious injury or death.

**HOW TO AVOID THE HAZARD**

When you shift into reverse, make sure there are no obstacles or people behind you. When it is safe to proceed, accelerate slowly.

**Engine break-in**

There is never a more important period in
the life of your vehicle than the period between zero and 20 hours. For this reason, we ask that you carefully read the following material. Because the engine is brand new, you must not push it excessively for the first several hours of running. During the first 20 hours, various parts of the engine wear and lubricate themselves to the correct operating clearances. During this period, prolonged full throttle operation or any condition might result in excessive engine heating, this must be avoided. However, momentary (2-3 seconds maximum) full throttle operation under load does not harm the engine.

Each full throttle acceleration sequence should be followed with a substantial rest period for the engine by riding at lower speed so the engine can recover from the temporary build up of heat. If any abnormality is noticed during this period, consult an authorized dealer.

0-10 hours:
Avoid continuous operation above half throttle. Allow a cooling period of five to ten minutes after every hour of operation. Vary the speed of the vehicle from time to time. Do not operate it at one set throttle position.

10-20 hours:
Avoid prolonged operation above 3/4
throttle. Rev the vehicle freely but do not use full throttle at any time.

**After break-in:**
The vehicle can now be operated normally.

**Parking**
When parking, stop the engine and shift the drive select lever into the neutral position. Apply the parking brake to help prevent the vehicle from rolling.

<table>
<thead>
<tr>
<th>! WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>POTENTIAL HAZARD</strong></td>
</tr>
<tr>
<td>Parking on a hill or other incline.</td>
</tr>
<tr>
<td><strong>WHAT CAN HAPPEN</strong></td>
</tr>
<tr>
<td>The vehicle could roll out of control, increasing the chance of an accident.</td>
</tr>
<tr>
<td><strong>HOW TO AVOID THE HAZARD</strong></td>
</tr>
<tr>
<td>Avoid parking on hills or other inclines. If you must park on an incline, apply the parking brake, and block the front and rear wheels with rocks or other objects. Do not park the vehicle on a steep incline.</td>
</tr>
</tbody>
</table>

**Parking on a slope**
1. Bring the vehicle to a stop by applying the brakes.
2. Stop the engine.
3. With the brakes applied set the parking brake.

**NOTE:**
Like many other vehicles, the parking brake acts on the rear wheels. For the parking brake to have the effect of braking all four wheels, shift to 4WD before stopping the engine.

**Accessories**

Accessories can affect the handling and control of your vehicle. Keep the following in mind when considering an accessory or operating a vehicle which has accessories.

- Choose only accessories designed for your vehicle. Your dealer has a variety of genuine accessories. Other accessories may also be available on the market. However, it is not possible for us to test all accessories for quality or fitting. Choose a genuine accessory, or one that is equivalent in design and quality.
- Accessories should be securely mounted. An accessory that shifts position or comes off while you are operating it could affect your ability to control the vehicle.
- Do not mount an accessory where it could
interfere with your ability to control the vehicle. Examples include (but are not limited to) an object that limits your ability to turn the steering wheel or one that limits your view.

- Use extra caution when driving a vehicle with accessories. The vehicle may handle differently than it does without accessories.

**Loading**

Cargo or a trailer can change the stability and handling of a vehicle. You must practice good judgment when carrying cargo or towing a trailer. Keep the following points in mind:

- Never exceed the weight limits shown. An overloaded vehicle can be unstable.

**MAXIMUM LOADING LIMIT**

- Vehicle loading limit (total weight of cargo, operator, passenger and accessories, and tongue weight): 385 kg (847 lb)
- Cargo bed: 100 kg (220 lb)
- Trailer hitch:
  - Pulling load (total weight of trailer and cargo): 550kgf (1,212lbf)
  - Tongue weight (vertical weight on trailer hitch point): 50kgf (110lbf)

- Choose a trailer with a hitch designed for use with a 5 cm (2in) receiver.

- Do not exceed the maximum tongue weight. You can measure tongue weight with a bathroom scale. Put the tongue of the loaded trailer on the scale with the tongue at hitch height. Adjust the load in the trailer, if you are carrying cargo and towing a trailer, include the tongue weight.
in the maximum vehicle load limit.

- Load cargo in the cargo bed as close to the center of the vehicle as possible and tie it down using the cargo hooks equipped on the cargo bed.
- Tie down cargo securely in the trailer. Make sure cargo in the trailer cannot move around. A shifting load can cause an accident.
- Make sure the load does not interfere with controls or your ability to see where you are going.
- Drive more slowly than you would without a load. The more weight you carry, the slower you should go. Although conditions vary, it is good practice not to exceed low range whenever you are carrying heavier loads or when towing a trailer.

- Allow more braking distance. A heavier vehicle takes longer to stop.
- Avoid making sharp turns unless at very slow speeds.
- Avoid hills and rough terrain. Added weight affects the stability and handling of the vehicle.
### ! WARNING

<table>
<thead>
<tr>
<th>POTENTIAL HAZARD</th>
</tr>
</thead>
<tbody>
<tr>
<td>Overloading this vehicle or carrying or towing cargo improperly.</td>
</tr>
</tbody>
</table>

### WHAT CAN HAPPEN

Could cause changes in vehicle handling, which could lead to an accident.

### HOW TO AVOID THE HAZARD

Never exceed the stated load capacity for this vehicle.

Cargo should be properly distributed and securely attached.

Reduce speed when carrying cargo or pulling a trailer. Allow greater distance for braking.

---

### DRIVING YOUR VEHICLE

#### Getting to know your vehicle

This off-highway utility vehicle will handle and maneuver differently from an ordinary passenger car or other vehicle.

Before you begin to use your vehicle, be sure you have read this Owner’s Manual completely and understand the operation of the controls, as well as the warning and caution labels on the unit.

This vehicle is designed for one operator and one passenger. The driver and passenger must always wear a seat belt. Never carry passengers in the cargo bed.
POTENTIAL HAZARD
Not wearing the seat belt.
Wearing the seat belt improperly.
WHAT CAN HAPPEN
There is a higher chance of severe injury or death.
HOW TO AVOID THE HAZARD
Always wear your seat belt when riding in the vehicle.
Be sure the seat belt is close-fitting across your hips and chest and is latched securely.

POTENTIAL HAZARD
Carrying a passenger in the cargo bed.
WHAT CAN HAPPEN
The passenger could fall or be struck by objects in the cargo bed.
HOW TO AVOID THE HAZARD
Never carry a passenger in the cargo bed. The cargo bed is designed to carry cargo only.

The total weight of operator, passenger, accessories, cargo, trailer tongue weight, and the vehicle itself must not exceed 845kg (1861lb). Carrying a passenger and cargo can affect vehicle handling.
POTENTIAL HAZARD
Overloading this vehicle or carrying or towing cargo improperly.

WHAT CAN HAPPEN
Could cause changes in vehicle handling, which could lead to an accident and/or injury.

HOW TO AVOID THE HAZARD
Never exceed the stated load capacity for this vehicle.
Cargo should be properly distributed and securely attached.
Reduce speed when carrying cargo or pulling a trailer and allow greater distance for braking. Follow all instructions in your Owner’s Manual for carrying cargo or pulling a trailer.

The driver and passenger must always wear a seat belt and an approved motorcycle helmet, eye protection, protective clothing (boots, long pants, long-sleeved shirt, goggles). Keep your hands and feet inside the vehicle at all times.
Learning to operate your Vehicle

You should become familiar with the performance characteristics of the vehicle in a large, flat area that is free of obstacles and other vehicles. Practice control of the accelerator pedal, brakes, steering, and drive select lever. Drive first at slow speed and become comfortable at that speed before gradually increasing your speed. Become familiar with the way the vehicle feels in low and high ranges, first in two-wheel drive (2WD) and then in four-wheel drive (4WD) and four-wheel drive with the differential locked (DIFF.LOCK). Also practice driving in reverse. Take the time to learn basic operation before attempting more difficult maneuvers.

! WARNING

POTENTIAL HAZARD
Operating this vehicle without wearing an approved motorcycle helmet, eye protection, and protective clothing.

WHAT CAN HAPPEN
Not wearing a helmet increases your chances of a severe head injury or death in the event of an accident. Operating without eye protection can result in an accident and increases your chances of a severe injury in the event of an accident.

HOW TO AVOID THE HAZARD
Always wear an approved motorcycle helmet that fits properly. You should also wear:
- Eye protection (goggles or face shield)
- A long-sleeved shirt or jacket
- Gloves
- Boots
- Long pants
Set the parking brake, shift to neutral, and follow instructions on to start the engine. Once it has warmed up, you are ready to begin driving your vehicle. With the engine idling, shift the drive select lever into low or high. Then release the parking brake. Press the accelerator pedal slowly and smoothly. The centrifugal clutch will engage and you will start to accelerate. Avoid higher speeds until you are thoroughly familiar with the operation of your vehicle. When slowing down or stopping, take your foot off the accelerator pedal and smoothly press the brake pedal. Improper use of the brakes can cause the tires to lose traction, reducing control and increasing the possibility of an accident.

**CAUTION:**
Do not shift from low to high or vice versa without coming to a complete stop and waiting for the engine to return to normal idle speed. Damage to the engine or drive train may occur.

**Turning your vehicle**
Whether you are on normal or rough terrain, it is possible for the vehicle to roll over or go out of control if you attempt sharp, high-speed turns. Do not attempt to turn around or make abrupt maneuvers on slopes.
Position your hands on the steering wheel so that your thumbs and fingers do not wrap around the wheel. This is particularly...
important when driving in rough terrain. The front wheels will move right and left as they respond to the terrain, and this movement will be felt in the steering wheel. A sudden jolt could yank the steering wheel around, and your thumbs or fingers could be injured if they are in the way of the steering wheel spokes.

Braking
The type of terrain affects braking ability. In most cases, gradual application of the brakes is more effective than abrupt braking, particularly on loose surfaces like gravel. Always allow for greater braking distance on rough, loose, or slippery surfaces.

Going uphill
Do not attempt to climb hills until you have mastered basic maneuvers on flat ground. Use proper driving techniques to avoid overturns on hills and slopes. Drive straight up hills, and avoid crossing the side of a hill, which increases your chance of rollover. Practice first on gentle slopes before attempting steeper hills. Always check the terrain carefully before attempting any hill.
Use common sense and remember that some hills are too steep for you to climb. 

**Maximum slope angle: 15°**

Choose carefully which hills you attempt to climb. Avoid hills with slippery surfaces or ones where you will not be able to see far enough ahead of you.

---

**POTENTIAL HAZARD**

Operating on excessively steep hills.

**WHAT CAN HAPPEN**

The vehicle can overturn more easily on extremely steep hills than on level surfaces or small hills.

**HOW TO AVOID THE HAZARD**

Never operate your vehicle on hills too steep for it or your abilities. Never operate vehicles on hills steeper than 15°.

Do not drive across the face of a hill. Go straight up the hill.

Practice on smaller hills before attempting large hills.

Before climbing the hill, first be sure you are operating in low range 4WD or, if necessary, with 4WD Diff. Lock. To climb a hill, you need traction, momentum, and steady throttle. Travel fast enough to keep your
momentum going, but not so fast that you cannot react to changes in the terrain as you climb. Slow down when you reach the crest of the hill if you cannot clearly see what is on the other side—there could be another person, an obstacle, or a sharp drop off.

If you start to lose traction or momentum when climbing, use the brakes to come to a stop. Do not attempt to turn the vehicle around. With your foot on the brake, look behind you and plan your descent. Shift the drive select lever in reverse so you can use the engine brake if necessary to slow your descent. Release the brake and begin to coast down the hill. Use engine braking as much as possible, gently applying the brakes when necessary.

**Going downhill**

Check the terrain carefully before going down a hill. When possible, choose a path that lets you drive your vehicle straight downhill. Avoid sharp angles that could allow the vehicle to roll over. Carefully choose your path and drive no faster than you will be able to react to obstacles that may appear.

! WARNING
POTENTIAL HAZARD
Going down a hill improperly.
WHAT CAN HAPPEN
Could cause loss of control or cause the vehicle to overturn.
HOW TO AVOID THE HAZARD
Always check the terrain carefully before you start down any hill. Never go down a hill at high speed. Avoid going down a hill at an angle that would cause the vehicle to lean sharply to one side. Go straight down the hill where possible.

On most slopes, you may use engine braking to help you go downhill slowly. Go as slowly as possible. If you start to go too fast, gently apply brakes. Sudden application of the brakes could cause the vehicle to start sliding.
If you begin to slide or skid, try to steer in the direction the vehicle is sliding to help you regain control.
If you must turn on the hill to avoid an obstacle, do so slowly and carefully. If the vehicle starts to tip, gradually steer in the downhill direction if there are no obstacles in your path. As you regain proper balance, gradually steer again in the direction you want to go.

Crossing through shallow water
If you must cross shallow water, choose your path carefully to avoid sharp drop-offs, large rocks, or slippery surfaces that could cause the vehicle to overturn. Never operate through water deeper than 33 cm (13 in) or fast flowing water. Wet brakes may have reduced effectiveness. After leaving the water, test your brakes. If necessary, apply the brakes several times to let friction dry out the linings.

**WARNING**

**POTENTIAL HAZARD**
Operating this vehicle through deep or fast-flowing water.

**WHAT CAN HAPPEN**
Loss of control, which could result in an accident or overturn, increasing the risk of drowning.

**HOW TO AVOID THE HAZARD**
Never operate this vehicle in fast flowing water or in water deeper than 33 cm (13 in). Remember that wet brakes may have reduced stopping ability. Test your brakes after leaving water. If necessary, apply the brakes several times to let friction dry out the linings.
CAUTION:
After riding your vehicle in water, be sure to drain the trapped water by removing the check hose at the bottom of the air filter case. Wash the vehicle in fresh water if it has been operated in salt water or muddy conditions.

Riding over rough terrain
Operating over rough terrain should be done with caution. Look for obstacles that could cause damage to the vehicle or could lead to a rollover or accident. Avoid jumping the vehicle as injury, loss of control, and damage to the vehicle could occur.

</tr>
</tbody>
</table>
Riding in brush or wooded areas

When operating in areas with brush or trees, take care to avoid hitting any branches or obstructions as you pass. Never hold onto the roll cage so your hand is outside the vehicle. Hold onto the handgrip INSIDE the roll cage.

Encountering obstacles on the trail

If you cannot go around an obstacle such as a fallen tree trunk or a ditch, stop the vehicle where it is safe to do so. Set the parking brake and get out to inspect the area thoroughly. Look from both your approach and the exit. If you believe you can continue safely, decide the path that will allow you to a right angle as possible to minimize vehicle tipping. Go only fast enough to maintain your momentum but still give yourself plenty of time to react to changes in conditions. If there is any question about your ability to maneuver safely over the obstacle, you should turn around, or back up until you find a less difficult path.
! WARNING

POTENTIAL HAZARD
Improperly operating over obstacles

WHAT CAN HAPPEN
Could cause loss of control or a collision.
Could cause the vehicle to overturn.

HOW TO AVOID THE HAZARD
Before operating in a new area, check for obstacles.
Use extreme caution when operating over large obstacles, such as large rocks or fallen trees.

PERIODIC MAINTENANCE AND ADJUSTMENT

Periodic inspection, adjustment and lubrication will keep your vehicle in the safest and most efficient condition possible. Safety is an obligation of the operator for vehicle inspection. Adjustment and lubrication is explained in the following pages.

! WARNING

POTENTIAL HAZARD
Servicing an engine while it is running.

WHAT CAN HAPPEN
Moving parts can catch clothing or parts of the body, causing injury.
Electrical components can cause shocks or can start fires.

HOW TO AVOID THE HAZARD
Turn off the engine when performing maintenance unless otherwise specified.
Have our company or dealer perform service if you are not familiar with vehicle service.
Owner's manual and tool kit
You are recommended to put this owner's manual in the vinyl bag and always carry it on the bottom of the driver seat as shown. Put the owner's tool kit and tire pressure gauge in the space beside the battery.
The service information included in this manual is intended to provide you, the owner, with the necessary information for completing your own preventive maintenance and minor repairs. The tools provided in the Owner's tool kit are sufficient for this purpose, except that a torque wrench is also necessary to properly tighten nuts and bolts.

NOTE:
If you do not have a torque wrench available during a service operation requiring one, take your vehicle to our company or dealer to check the torque settings and adjust them as necessary.

**NOTE:**

- Recommended brake fluid: DOT4
- Brake fluid replacement:
  - Replace the brake hoses every four years, or if cracked or damaged.
  - When disassembling the master cylinder or caliper, replace the brake fluid.
    Normally check the brake fluid level and add fluid as required.
  - On the inner parts of the master cylinder and caliper, replace the oil seals every two years.
Hood upper cover open
Let the hood lock and switch be horizontal position, build up the hood upper cover and it can be opened.

1. Hood
2. Hood upper cover
3. Hood lock
4. Hood rotary switch

Hood upper cover close
Let the hood lock and switch be horizontal position, put the fixed column of the hood upper cover in the fixed hole of the plastic. Then put the hood lock and rotary switch be the vertical position of the car and the key can be pulled out.

NOTE:
Failure to follow the described procedure for opening the service cover may lead to cover damage.
Engine oil level verification

Strictly following this procedure, otherwise wrong oil level may be indicated.

1. Ensure vehicle is on a level surface.
2. Start engine and let idle for a few minutes.
3. Stop engine. Wait a few minutes to allow oil to flow down to crankcase then check oil level.
4. Remove left and right seats, gear shift handle.
5. Remove engine shield
6. Remove dipstick and wipe clean stem.
7. Fully screw in dipstick to check oil level.
8. Remove dipstick and read oil level. Oil level must be between minimum (2) and maximum (1) marks on dipstick.
9. There is a capacity of 300 ml between the two marks. Refill oil as necessary. Do not overfill.
10. Re-install dipstick.
**Engine coolant level verification**

<table>
<thead>
<tr>
<th>!WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Check coolant level with engine cold.</td>
</tr>
</tbody>
</table>

1. Place vehicle on a level surface.
2. Observe the height of the coolant from Car's outer body, it is no need to increase the coolant if the liquid level between FULL and LOW.

**NOTE:**

Coolant level can be checked by looking at the side of the coolant expansion tank.

3. If the height of the coolant is under LOW, please add the coolant.
   (1) Open the hood upper cover.
   (2) Rotate the auxiliary radiator cover left to make it open.
   (3) Put a funnel on auxiliary radiator inlet in case the coolant overflow. Don't be too full and the highest position to the "FULL".
   (4) Screw the auxiliary radiator cover to the right.
   (5) Re-install the hood upper cover.
**Recommended engine coolant**

<table>
<thead>
<tr>
<th>Coolant</th>
</tr>
</thead>
<tbody>
<tr>
<td>Recommended product</td>
</tr>
<tr>
<td>Ethyl glycol/water mix(-35℃)</td>
</tr>
<tr>
<td>Alternative, or if not available</td>
</tr>
<tr>
<td>Distilled water and antifreeze solution(50% distilled water,50%antifreeze)</td>
</tr>
</tbody>
</table>

**NOTE:**

Always use ethylene-glycol antifreeze containing corrosion inhibitors specifically for internal combustion aluminum engines.

---

**Rear knuckle upper and lower pivot lubrication**

Lubricate the knuckle upper and lower pivots with a grease gun.

**Recommended lubricant:**

Lithium-soap-based grease
**Steering shaft lubrication**
Lubricate the pivot points.

Recommended lubricant:
Lithium-soap-based grease
(all purpose grease)

---

**Wheel removal**
1. Loosen wheel nuts.
2. Elevate the vehicle.
3. Remove nuts from the wheel.
4. Remove the wheel.

1. Nut (M10)
Wheel installation

1. Install the wheel and nuts.

NOTE:

- The arrow mark on the tire must point in the direction toward the wheel turns.
- Tapered nuts are used for both the front and rear wheels. Install the nut with its tapered side towards the wheel.

2. Lower the vehicle so that the wheel is on the ground.
3. Tighten the wheel nuts to the specified torque.

Wheel nut to torque:
- Front: 80N.m (8.2m.kgf)
- Rear: 80N.m (8.2m.kgf)

Battery
This vehicle is equipped with a sealed-type battery. It is not necessary to check the electrolyte or add distilled water in the battery. If the battery seems to have discharged, consult your dealer.

**CAUTION:**

Do not try to remove the sealing caps of the battery calls. You may damage the battery.

<tbody>
<tr>
<td>POTENTIAL HAZARD</td>
</tr>
<tr>
<td>Failure to handle batteries or battery electrolyte carefully.</td>
</tr>
</tbody>
</table>

**WHAT CAN HAPPEN**

You could be poisoned or severely burned by the sulfuric acid in battery electrolyte. Batteries produce explosive gases.

**HOW TO AVOID THE HAZARD**

Avoid contact with skin, eyes or clothing. Always shield eyes when working near batteries. Keep out of reach of children.

Antidote:

EXTERNAL: Flush with water.

INTERNAL: Drink large quantities of water or milk. Follow with milk of magnesia, beaten egg or vegetable oil. Get prompt medical attention.

EYES: Flush with water for 15 minutes and get prompt medical attention. Keep batteries away from sparks, flames. Ventilate when charging or using in a closed space.
Battery maintenance

CAUTION:

A special battery charger (constant voltage/ampere or constant voltage) is required for recharging a sealed-type battery. Using a conventional battery charger may shorten the battery life.

1. When the vehicle is not used for a month or longer, remove the battery and store it in a cool, dark place. Completely recharge the battery before reinstallation.

2. Always make sure the connections are correct when putting the battery back in the vehicle.

| 1. Negative battery lead | 2. Positive battery lead |

!WARNING

Do not connect the negative lead of the jumper cable to the negative terminal of the battery in the vehicle.

- Be especially careful not to:
- Touch the positive lead of the jumper cable to the negative lead.
- Reverse the polarity of the jumper cables when connecting to the batteries. This could cause the battery to explode and severe injury.

Blown Fuses
All of the electrical circuits on your UTV have fuses to protect them from damage caused by excess current flow or short-circuiting. If something electrical on your UTV stops working, the first thing you should check for is a blown fuse (1). Check all the fuses before looking elsewhere for another possible cause of the problem. Replace any blown fuses and check component operation.

Fuse replacement
The main fuse and the fuse box are located under the hood upper cover. If a fuse is blown, turn off the main switch and install a new fuse of the specified amperage.
1. Remove the battery compartment cover by lifting up on the lid.

2. Turn the key to “OFF” and turn off the electrical circuit in question.

CAUTION:
To prevent accidental short-circuiting, turn off the main switch when checking or replacing a fuse.

3. Remove the blown fuse, and then install a new fuse of the specified amperage.

1. Battery compartment cover

</tr>
<tr>
<td>(13)</td>
<td>10A、15A、20A、30A</td>
</tr>
</tbody>
</table>

4. Turn the key to "ON" and turn on the electrical circuit in question to check if the device operates.
5. If the fuse immediately blows again, have a registered dealer check the electrical system.
6. Install the battery compartment cover.
7. Close the hood upper cover.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>POTENTIAL HAZARD</td>
</tr>
<tr>
<td>Using an improper fuse</td>
</tr>
</tbody>
</table>

WHAT CAN HAPPEN
An improper fuse can cause damage to the electrical system, which could lead to a fire.

HOW TO AVOID THE HAZARD
Always use a fuse of the specified rating.
Never use a material in place of the proper fuse.
Replacing a headlight bulb
If a headlight bulb burns out, replace it as follows.

1. Left and right headlights on the front panel can be taken off from the back of it.

2. Remove the bulb holder cover at the rear of the headlight by pulling it off.

1. Front plate

1. Headlight bulb holder cover
2. Steering lamp holder
3. Driving lamp holder
3. Push the defective bulb in and turn it counter-clockwise to remove it from the bulb holder.

1. Light bulb retaining bolt
2. Steering holder
3. Driving lamp holder

**NOTE:**
The headlight bulb cannot be removed from the headlight bulb holder. To replace the headlight bulb, replace the headlight bulb holder assembly.

**WARNING**

**POTENTIAL HAZARD**
A headlight bulb is hot when it is on and immediately after it is turned off.

**WHAT CAN HAPPEN**
You can be burned, or a fire could start if the bulb touches something flammable.

**HOW TO AVOID THE HAZARD**
Wait for the bulb to cool before touching or removing it.
4. Insert a new headlight bulb holder assembly by inserting it and turning it clockwise

1. Do not touch the glass part of the bulb

CAUTION:

Do not touch the glass part of the headlight bulb to keep it free from oil, otherwise the transparency of the glass, the luminosity of the bulb, and the bulb life will be adversely affected. Thoroughly clean off any dirt and fingerprints on the headlight bulb using a cloth moistened with alcohol or thinner.

5. Install the headlight bulb holder by turn.
6. Install the headlight bulb holder cover at the rear of the headlight.
Tail/brake light bulb replacement

If a tail/brake light bulb burns out, replace it as follows:

1. Left and right tail light on the rear plate, can take off back of it.

2. Push the defective bulb in and turn it counter-clockwise to remove it from the bulb holder.

3. Push the new bulb in and turn it clockwise to install in the bulb holder.

4. Install the bulb holder together with the bulb by turning it clockwise.
Troubleshooting

Although vehicles receive a rigid inspection before shipment from the factory, trouble may occur during operation. Any problem in the fuel, compression, or ignition systems can cause poor starting and loss of power. See the troubleshooting chart for more information. If your vehicle requires any repair, take it to an authorized dealer. The technicians at a dealership have the tools, knowledge, and experience to properly service your vehicle. Use only genuine parts on your vehicle. Imitation parts may look similar, but they are often inferior. Consequently, they have a shorter service life and can lead to expensive repair bills.

</tr>
</tbody>
</table>
Troubleshooting charts
Starting problems or poor engine performance

1. Fuel
   - Check if there is fuel in the fuel tank.
     - There is fuel: Remove the fuel hose from the fuel pump.
     - No fuel: Supply fuel, Restart the engine.
     - No fuel: Check the fuel flow.
     - No fuel: Fuel pump is clogged.
     - Fuel pump is clogged: Ask an dealer to inspect.

2. Compression
   - Use the electric starter to see if there is compression.
     - There is compression: Compression normal.
     - No compression: Ask an dealer to inspect.

3. Ignition
   - Remove the spark plug and check the electrodes.
     - Wet: Wipe clean with dry cloth.
     - Dry: Attach spark plug cap and ground to chassis.
     - Wet: Ask an dealer to inspect.
     - Dry: Use the electric starter.
     - Spark is good: Ignition system is normal.
     - Spark is weak: Adjust the spark plug gap or replace the spark plug.
     - No spark: Ask an dealer to inspect.

4. Battery
   - Use the electric starter.
     - Engine turn over quickly: Battery is good.
     - Engine turn over slowly: Check the connections recharge.
     - No spark: Ask an dealer to inspect.
Engine overheating

**WARNING**

**POTENTIAL HAZARD**
Removing the radiator cap when the engine and radiator are still hot.

**WHAT CAN HAPPEN**
You can be burned by hot fluid and steam blown out under pressure.

**HOW TO AVOID THE HAZARD**
Wait for the engine to cool before removing the radiator cap. Always use a thick rag over the cap. Allow any remaining pressure to escape before completely removing the cap.

**NOTE:**
If it is difficult to get the recommended coolant, tap water can be temporarily used, provided that
it is changed to the recommended coolant as soon as possible.

FAULT CODES
A fault code is an indication that a glitch or malfunction is detected by the self-diagnostic system.

Read fault code
Remove the upper cover of engine hood and look for the harness connector of fault diagnosis tester beside the ECU. Unplug the protector, connect the fault diagnosis tester by special data cable. Turn on the fault diagnosis tester and read fault code.

CLEANING AND STORAGE

A. CLEANING

Frequent, thorough cleaning of your vehicle will not only enhance its appearance, but also improve its general performance and extend the useful life of many components.

1. Before cleaning the vehicle:
   a. Block off the end of the exhaust pipe to prevent water entry using a plastic bag and a strong rubber band.
   b. Make sure the spark plug and all filler caps are properly installed.

2. If the engine case is excessively greasy, apply degreaser with a paintbrush. Do not apply degreaser to the wheel axles.

3. Rinse the dirt and degreaser off with a garden hose. High-pressure water is not necessary.

CAUTION:
Excessive water pressure may cause water seepage and deterioration of wheel bearings, brakes, transmission seals and electrical devices. Many expensive repair bills have resulted from high-pressure detergent applications such as those available in coin-operated car washers.

4. Once the majority of the dirt has been hosed off, wash all surfaces with warm water and mild, detergent-type soap. An old toothbrush may be handy for hard-to-reach places.

5. Rinse the vehicle off immediately with clean water and dry all surfaces with a clean towel or soft absorbent cloth.
6. Clean the seats with vinyl upholstery cleaner to keep the cover pliable and glossy.

7. Automotive type wax may be applied to all painted and chrome plated surfaces. Avoid combination cleaner-waxes. Many contain abrasive chemicals that could scratch the paint or protective finish. When finished, start the engine and let it idle for several minutes.

<tr>
<td>Test the brakes after washing. Apply the brakes several times at slow speeds to let friction dry out the linings.</td>
</tr>
</tbody>
</table>

B.STORAGE

Long-term storage (60 days or more) of your vehicle will require preventive procedures to guard against deterioration. After thoroughly cleaning the vehicle, prepare for storage as follows:

1. Fill the fuel tank with fresh fuel and add the specified amount of fuel stabilizer and conditioner or an equivalent product. Operate treated fuel through the fuel system.

2. Drain the fuel from the carburetor float chamber into a clean container by loosening the drain bolt; this will help prevent fuel deposit build up. Pour the
drained fuel onto the fuel tank.

Specified amount:
1 oz of stabilizer to each gallon of fuel
(or 7.5 cc of stabilizer to each liter of fuel)

NOTE:
Use of fuel stabilizer and conditioner eliminates the need to drain the fuel system. Consult an authorized dealer if the fuel system needs to be drained instead.

3. Remove the spark plug and pour about one tablespoon of SAE 10W30 or 20W40 motor oil in the spark plug. Ground the spark plug wire and turn the engine over several times to coat the cylinder wall with oil.

4. Lubricate all control cables.
5. Raise the frame so that all wheels are off the ground.
6. Tie a plastic bag over the exhaust pipe outlet to prevent moisture from entering.
7. If storing in a humid or salt-air atmosphere, coat all exposed metal surfaces with a light film of oil. Do not apply oil to any rubber parts or the seat covers.
8. Remove the battery and charge it. Store it in a dry place and recharge it once a month. Do not store the battery in an excessively warm or cold place (less than 0 Degrees C (30 Degrees F) or more than 30 Degrees C (90 Degrees F)).

NOTE:
Make any necessary repairs before storing the vehicle.
NOISE REGULATION

TAMPERING WITH NOISE CONTROL SYSTEM PROHIBITED:

Federal law prohibits the following acts: （1）The removal or rendering inoperative by any person other than for purposes of maintenance, repair, or replacement of any device or element of design incorporated into any new vehicle for the purpose of noise control prior to its sale or delivery to the ultimate purchaser or （2）the use of the vehicle after such device or element of design has been removed or rendered inoperative by any person.

“AMONG THOSE ACTS PRESUMED TO CONSTITUTE TAMPERING ARE THE ACTS LISTED BELOW.”

These acts include tampering with the following systems; i.e.; modification, removal, etc.
